The aquaculture industry is fast expanding around the globe and causing major environmental and social disruptions. The volume is about getting a 'good governance' grip on this important industry. The book highlights the numerous law and policy issues that must be addressed in the search for effective regulation of aquaculture. Those issues include among others: the equitable and fair assignment of property rights; the design of effective dispute resolution mechanisms; clarification of what maritime laws apply to aquaculture;

adoption of a proper taxation system for aquaculture; resolution of aboriginal offshore title and rights claims; recognition of international trade law restrictions such as labeling limitations and food safety requirements; and determination of whether genetically modified fish should be allowed and if so under what controls. This book will appeal to a broad range of audiences: undergraduate and postgraduate students, academic researchers, policy makers, NGOs, practicing lawyers and industry representatives.

With aquaculture operations fast expanding around the world, the adequacy of aquaculture-related laws and policies has become a hot topic. This much-needed book provides a three-part guide to the complex regulatory landscape. The

expert contributors first review the international legal dimensions, including chapters on law of the sea, trade, and access and benefit sharing. Part Two offers regional perspectives, discussing the EU and regional fisheries management organizations. The final part contains eleven case studies exploring how leading aquaculture producing countries have been putting sustainability principles into practice.

Our oceans are increasingly targeted for their resources. This forward-looking collection of essays explores how States and regional arrangements are responding to challenges in the growth of aquaculture. Clarity of exposition, in what is an increasingly

This volume reviews and critiques efforts to recast governance of marine fisheries on the basis of sustainability principles (e.g., precautionary and ecosystem approaches), with a focus on Canada ' s transboundary fisheries management arrangements, and surveys international laws and policy developments governing transboundary fisheries.

Our oceans are suffering under the impacts of climate change. Despite the critical role that oceans play in climate regulation, international climate law and the law of the sea are developed as two different, largely separate, legal regimes. The main objective of this book is to assess how the law of the sea can be interpreted, developed and applied to support the objectives of the United Nations Climate Regime. By identifying the potential and constraints of the law of the sea regime in supporting and complementing the climate regime in the mitigation of and adaptation to climate change, this book offers a new perspective on the law of the sea and its capacity to evolve to respond to systemic challenges, and its potential to adapt and ensure a resilient and sustainable

Fisheries and Aquaculture: The Food Security of the Future takes a multidisciplinary approach in evaluating the fisheries and aquaculture sectors from the scientific and practical perspectives of industry professionals. The authors recognize the importance of looking at the industry from a value chain viewpoint, not only for food security but also for a blue economy. The book takes a unique and innovative approach to show how fisheries and aquaculture can achieve sustainability and how small fishery communities can become highly successful fishery and aquaculture communities and contribute to overall industry globalization. This is a practical and useful reference for a wide-ranging

audience. It is for those who wish to make systematic efforts to develop their fisheries or aquaculture sectors, scientists and researchers, anyone in fisheries management or marine resource management, fish farmers, policy makers, leaders and regulators, operations researchers, as well as faculty and students. Presents potential solutions for more economical and sustainable fisheries development Provides an overview of the fishing industry ' s technology options, ranging from less-developed communities to modern high-tech communities Demonstrates market principles in the fisheries and aquaculture sectors, particularly demand for seafood in various parts of the world, its availability and the importance of ownership rights

Ocean and Coastal Law and Policy addresses the reasons for this decline and explains the laws protecting the marine environment in a clear and concise manner. The authors have real-world experience with their topics, and discuss how the law works in practice rather than merely in theory. This is an excellent resource for the practitioner, government official, or scholar in their efforts to transition to an ecosystem-based management approach.

Volume 3. This document identifies elements of a legislation that will encourage the emergence of a sustainable commercial aquaculture. The aquaculture law of an individual country must provide the operator with a secure right to conduct aquaculture operations, to the property on

which the farm will be located, to good quality water and to the produce. It must also ensure environmental sustainability, through permit or licence systems, without imposing unnecessary costs on applicants. Only proposals with the potential for serious environmental harm should be subjected to a full environmental impact assessment.

Environmental supervision must extend to controls over the use of exotic species and products from modern biotechnology including genetically modified organisms, disease control and health management and to any water quality concerns created by the proposed project. To minimise costs, countries are encouraged to adopt a single window approach for the numerous approvals usually required for an aquaculture operation and screen initial

applications. They could also consider creating a single agency to promote aquaculture and to monitor the progress of applications. Aquaculture regimes of selected African countries are measured against the elements required to encourage sustainable commercial aquaculture, and improvements that are applicable to all countries in sub-Saharan Africa are suggested.
