Modern Consumer Law is a lively, concise, problem-focused text on contemporary consumer law. It is the only text on the market conceptualized after Dodd-Frank and its creation of the Consumer Financial Protection Bureau. The book takes a functional approach to consumer law, looking at types of transactions such as mortgages as well as kinds of laws such as disclosure rules. It examines core theoretical questions in an accessible way, revealing consumer law as a series of statutes built on the common law foundations of contract and tort. Organized into 28 class-sized assignments, the book is easy to adapt to a teacher 's preferences in terms of focus and class credits. The problems provide students with the opportunity to apply statutes to realistic situations and ask them to consider the perspectives of consumers, businesses, and lawmakers. Katherine Porter is a national expert in consumer law and a co-author of Wolter Kluwer 's The Law of Debtors and Creditors.

A Passion to Preserve explores this authentic and complex dimension of gay men 's lives by profiling early and contemporary preservationists from throughout the United States, highlighting contributions to the larger culture that gays are exceptionally inclined to make.

The experimental approach in economics is a driving force behind some of the most exciting developments in the field. The 'experimental revolution' was based on a series of bold philosophical premises which have remained until now mostly unexplored. This book provides the first comprehensive analysis and critical discussion of the methodology of experimental economics, written by a philosopher of science with expertise in the field. It outlines the fundamental principles of experimental inference in order to investigate their power, scope and limitations. The author demonstrates that experimental economists have a lot to gain by discussing openly the philosophical principles that guide their work, and that philosophers of science have a lot to learn from their ingenious techniques devised by experimenters in order to tackle difficult scientific problems.
