Parents will do almost anything to get their kids to eat healthier, but unfortunately, they've found that begging, pleading, threatening, and bribing don't work. With their patience wearing thin, parents will "give in" for the sake of family peace, and reach for "kiddie" favorites-often nutritionally inferior choices such as fried fish sticks, mac n' cheese, Pop-sicles, and cookies. Missy Chase Lapine, former publisher of Eating Well magazine, faced the same challenges with her two young daughters, and she sought a solution. Now in The Sneaky Chef, Lapine presents over 75 recipes that ingeniously disguise the most important superfoods inside kids' favorite meals. With the addition of a few simple make-ahead purees or clever replacements, (some may surprise you!) parents can pack more fiber, vitamins, and antioxidants in their kids' foods. Examples of "Sneaky" recipes include: No Harm Chicken Parm Power Pizza Incognito Burritos Guerilla Grilled Cheese Brainy Brownies Health-by-Chocolate Cookies Quick fixes for Jell-O(R)

The seventh edition of Chapra and Canale's Numerical Methods for Engineers retains the instructional techniques that have made the text so successful. Chapra and Canale's unique approach opens each part of the text with sections called "Motivation," "Mathematical Background," and "Orientation." Each part closes with an "Epilogue" containing "Trade-Offs," "Important Relationships and Formulas," and "Advanced Methods and Additional References." Much more than a summary, the Epilogue deepens understanding of what has been learned and provides a peek into more advanced methods. Helpful separate Appendices. "Getting Started with MATLAB" and "Getting Started with Mathcad" which make excellent references. Numerous new or revised problems are drawn from actual engineering practice. The expanded breadth of engineering disciplines covered is especially evident in these exercises, which now cover such areas as biotechnology and biomedical engineering. Excellent new examples and case studies span all areas of engineering giving students a broad exposure to various fields in engineering. Users will find use of files for many popular software packages, specifically MATLAB®, Excel® with VBA, and Mathcad®. There is also material on developing MATLAB® m-files and VBA macros.
